-A recombinant adeno-associated virus comprising sequences encoding factor IX and regulatory control sequences which permit expression of factor IX in a cell, wherein the level of contaminating adenoviral helper virus is no greater than that obtained by subjecting said recombinant AAV to four rounds of cesium chloride gradient centrifugation.

A composition comprising a physiologically compatible carrier 13(New). and a recombinant adeno-associated virus comprising sequences encoding factor IX and regulatory control sequences which permit expression of factor IX in a cell, wherein the level of contaminating adenoviral helper virus is no greater than that obtained by subjecting said recombinant AAV to four rounds of cesium chloride gradient centrifugation

The composition according to claim 13, wherein 14 (New). said composition comprises about 1×10^8 to about 5×10^{11} particles of the recombinant adeno-associated virus.

The composition according to claim 14, wherein said 15(New). composition comprises at least 109 particles of the recombinant adeno-associated virus.

The composition according to claim 13, wherein the 16 (New). composition comprises 1012 to 1013 genomes of the recombinant adeno-associated virus per milliliter carrier.

The composition according to claim 13, wherein said 17 (New). composition is formulated for intramuscular injection.
